

VISY

Complete Access and Area Control

Port Access Control System Gate Operating System

Improving Efficiency and Meeting Targets

Visy Access Gate manages access and area control for everything that goes in or out of a port or terminal via road, rail, or crane.

Our flexible and comprehensive approach to process management is designed to deliver ROI:

- Reduce operating expenses
- Optimize safety and security
- Increase throughput capacity

By being capable of managing the most complex port and terminal access control situations, Visy Access Gate offers gains in performance as well as compliance with regulations such as ISPS. The result is a more efficient and safer business environment.

Staying Ahead

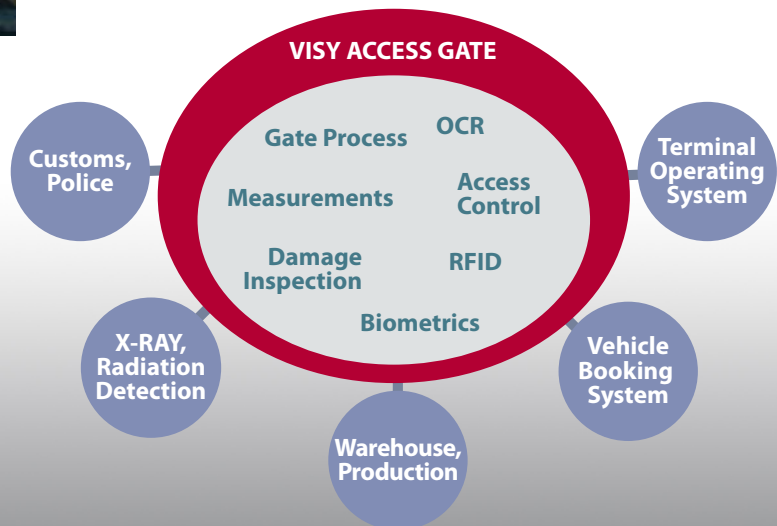

We at Visy strongly invest in research and development to better understand our customers' needs and to deliver the right system.

Significant solutions include:

- **Crane OCR** for STS, RTG, ASC and SC
- **Mobile OCR** for x-ray and radiation detection units
- **Pedestals and driver kiosks**
- **RFID** applications
- **Multi-Gate** access and area control for ports with several terminals
- Line scan imaging for **damage inspection**

Sensible Solutions, Long Term Approach

- Visy systems are forward-thinking, flexible, and scalable; capable of managing the most complex gate and access-control processes.
- All system software is made in house by Visy engineers and can be upgraded to meet your specific project requirements.
- All system hardware is commercial off-the-shelf and nonproprietary for minimal service and maintenance.

Visy's solutions are scalable and available in a variety of configurations to meet the specific needs of of your operation.

Who We Are

Visy is a leading access and area control systems provider for port authorities, public and private logistics terminals, customs agencies, and government organizations.

Visy has designed and implemented the largest Port Access Control System (PACS) in Europe, the largest border traffic control system between the EU and the East.

Visy also provides both basic access control and advanced gate operating systems for industry and logistic hubs.

History of Innovation

- Founded in 1994 to develop OCR technology
- Software house specializing in advanced systems integration for maritime and defense industries
- Visy Access Gate in Finland is the largest PACS in Europe - more than 100 lanes and checkpoints in one system
- Global presence: Systems delivered to Germany, UK, Italy, Spain, Brazil, Malaysia, Morocco, Mexico, Finland, Luxembourg, Sweden, Estonia, Latvia, and Poland among others
- Privately owned: 100% of the company is owned by the founders, employees and their families
- Company culture of success and "we can do it" attitude
