

VISY

Visy Access Gate

Visy Access Gate manages access and area control for everything that goes in or out of a port or terminal via road, rail or crane.

Visy Access Gate is an automated solution, that increases efficiency, security and accuracy of records and reduces operating costs.

The system streamlines operations by identifying vehicles, cargo, fleet machinery and people as they pass through the gate.

Benefits

- Reduces operating expenses and increases efficiency of operations by providing real-time tracking of personnel, vehicles, containers and cargo.
- Increases throughput capacity at gateways.
- Increases safety and security.
- Improves management control with automated verification of traffic movement.
- Provides ISPS code compliance.
- Simple interface with TOS and management systems.
- Simplifies insurance claims management.

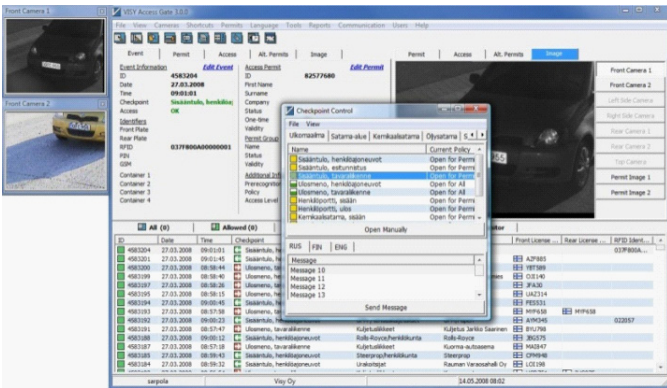

Applications

- Port Authorities and gate facilities
- Ro-Ro and container terminals
- Intermodal terminals and train yards
- Industrial and logistics areas
- Paper and steel mills
- Airports

Features

- License plate recognition (LPR) supports over 200 different types of plates
- Container number recognition (OCR) including verification of the check-digit
- High-resolution damage inspection imaging
- Dangerous goods, IMO, ISO, ADR code recognition
- RFID ready
- Web applications to secure access permit management
- Flexible, scalable and adaptable. Capable of managing the most complex situations
- Fully automated and self-sustaining traffic guidance system
- Extensive reporting and traffic analysis tools
- Automated data archiving
- Seamless interfacing with existing management systems with XML messaging
- 24/7 nonstop operation
- Remote maintenance
- Visy Access Gate solutions are available in many configurations
