

# **VEHICLE BOOKING SYSTEM**

Vehicle Booking System (VBS) for making booking and visitor traffic management simple

## **Enhanced customer experience**

Visy's Vehicle Booking System (VBS) is a solution for booking, preparing, and managing visitor traffic. VBS provides terminal operators identification data of vehicles and cargo in advance, therefore saving time at the terminal's gate area and making incoming and outgoing traffic flow easy to manage and analyze. In addition to complementing customer experience, VBS enhances operational planning and improves traceability of containers.

Web and mobile applications for booking terminal visits

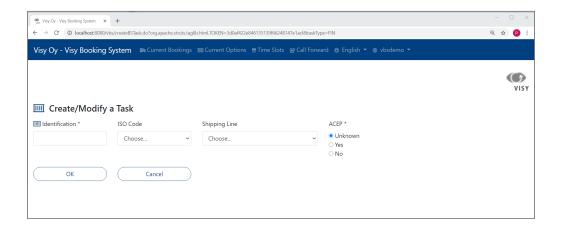

Increases throughput capacity

Streamlines gate transactions

## Simple bookings

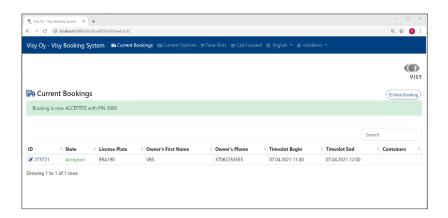

VBS enables smooth terminal visits for transport coordinators and truck drivers. Preparing a visit with VBS's user interface is easy: drivers reserve an available time slot and enter vehicle, and container details. After the terminal visit has been prepared, customer-specific logic and validations are executed at the gate area to allow access to and from the terminal area. On the premises, the booking information is compared with real-time identification data captured by the terminal's gate operating system.

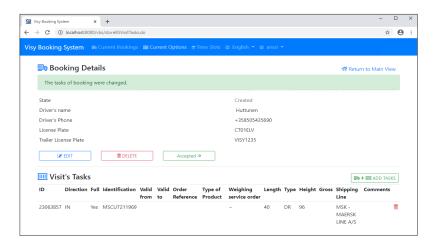

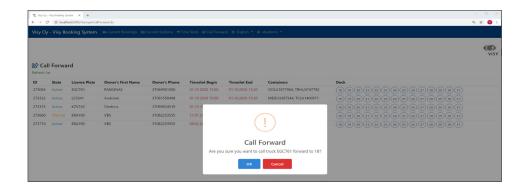

# **Comprehensive management**

VBS gives terminal operators insights and possibilities for reviewing current and upcoming traffic events and truck appointments, while also providing extensive management tools for operational planning. Functionalities of VBS are customizable to ensure a good match with customer preferences and requirements. VBS can be seamlessly integrated to a terminal's existing system base, including Gate Operating System (GOS), Terminal Operating System (TOS), and self-service kiosks. VBS ensures smooth data exchange and well-functioning transactions in every stage of a visit.

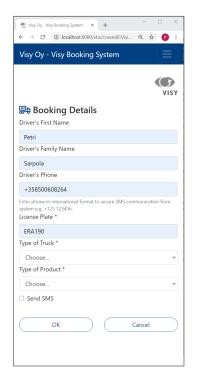

### Mobile use

VBS' mobile use makes booking quick and simple.

### **Features**

- · Web and mobile applications for booking and preparing terminal visits
- Customizable application to match customers' operational requirements and preferences
- Dynamic fields
- · Up-to-date instructions for truck drivers via SMS messaging
- Kiosks validate drivers to enter with pre-issued PIN codes
- Smooth data exchange and interfacing with GOS and other third-party systems (TOS, POS, ERP)

Automatically image and capture identifiers of cargo and vehicles

Centralized management of vehicles and assets

Globally local support

We deliver versatile automation solutions to create comprehensive identification and access control ecosystems. Our product & solution selection for ports and terminals is wide to match the diversity of our customers' requirements and preferences, and to cover every part of the terminal where identification or tracking of containers, vehicles, and cargo is needed.

Automated access control and container identification in every turn ensures a smooth traffic flow and increases profits through enhanced operational efficiency. Our global high-quality partner network minimizes reaction time and our experience of three decades in the port and terminal industry guarantees top-class solutions and support worldwide.

**Implementation & delivery of our solutions is reliable without exception.** With our professional project management and skilled team, we deliver customized and demanding solutions designed to achieve the highest possible advantages of process automation.

# **About us**

Visy is a pioneer in optical character recognition (OCR), applied AI, and deep learning for camerabased automation and access control solutions. Our expertise is based on over 25 years of experience in research and development of industry-leading technologies, and we have established a strong position as one of the top global vendors in gate automation and OCR solutions.
